

CROSS

Easy Transfer Roller

X Convert Roller Sections for Bidirectional Diverting

X Easily Installs into Any Brand Frame with No Modifications

X Replaces Any Brand 1.9" O.D. Grooved Rollers

X Reduces Manual Push Fatigue up to 75%

X Ball Transfer Like Product Reorientation

The CrossX Easy Transfer Roller converts a standard roller conveyor section into a transverse top push configuration quickly and cost-effectively, delivering the functionality of a transverse roller top belt conveyor without the higher investment.

Unlike traditional rollers that only move items forward, the innovative CrossX Roller enables smooth, controlled redirection of packages and containers across conveyor lines, drastically improving line flexibility. The CrossX system is a simple upgrade that adapts any brand 1.9" O.D. grooved roller conveyor into an ergonomic, easy-push diverting solution. Installation is fast, with CrossX Rollers dropping directly into any brand conveyor frame with no required modifications.

This game-changing, bidirectional roller system is designed for parcel and package handling environments where workers frequently push items across conveyor lines. By reducing the force required to push packages by up to 75%, the CrossX Roller relieves worker fatigue, minimizes strain, and enhances overall efficiency.

Whether optimizing existing lines or designing new configurations, the CrossX Easy Transfer Roller delivers smooth transfers, durable construction, and an ergonomic solution that grows with your operation.

EASILY CONVERT ROLLER SECTIONS

TO TRANSVERSE PUSH SECTIONS
